Full-stack developer since 2022, building features from the database to the phone screen. Now building the mobile app, login and inventory at BoostOwl, an early-stage SaaS (beta).

EXPERIENCE

BoostOwl – *Software Engineer Intern* May 2026 – Present

- Built BoostOwl's installable mobile app (PWA) by rebuilding every screen for phones in React (318 components, offline start, safe updates), so shop owners run orders, stock and chats from a phone while desktop stayed unchanged.
- Ended random user logouts by redesigning refresh-token rotation in Node.js, PostgreSQL and Redis (atomic rotation, short grace window, one refresh shared across tabs) without weakening token-theft protection.
- Designed batch-level inventory with FIFO / expiry-first stock allocation and stock reservation across 12 PostgreSQL migrations, and fixed a GST rounding bug that billed an INR 200 order as INR 199.99.
- Built Web Push notifications and an in-app action list on Kafka events, so staff learn about new chats, orders and payments even with the app closed.
- Shipped 11 PRs using Claude Code and Cursor while owning design, review and testing: fixed 129 code-review findings, each with a test that failed first, and added 1,030+ test files (Vitest, Playwright).

Upwork – *Freelance Developer* Mar 2025

- Built real-time chat with AI-to-human handoff for an AI-powered CV builder and job board: a chat widget with anonymous and signed-in sessions, saved chat history and typing indicators (React, Vite, Socket.IO).
- Built the admin live-chat page, with real-time notifications that open the right conversation, and unread-message handling (React, Redux Toolkit / RTK Query, Socket.IO).

Gemini Solutions, Panchkula – *Full Stack Developer* Nov 2022 – Sep 2024

- Built backend APIs for an internal HR system (HRIS) – analytics, resignation flow, filters and integrations with other internal projects – using Node.js, Serverless and MongoDB, and built the feedback flow for onboarded candidates from scratch.
- Wrote OpenAPI / Swagger documentation for the existing HRIS backend APIs, and used MongoDB aggregation pipelines to query and reshape data.
- Fixed bugs across the Angular frontend and Node.js backend, and shipped frontend and backend releases every sprint.

PROJECTS

GumiGumi – travel tracker app | [Google Play](#) Apr 2025

3D-globe travel tracker with photo uploads, stats, share cards and an AI chatbot. Built solo in 4 weeks for notJust Hack 2025 and shipped to Google Play and the App Store (React Native, Expo, TypeScript, Supabase, Mapbox, Gemini API).

Spill It – anonymous messaging app (Next.js, Auth.js, MongoDB) | [mystery-message-psi.vercel.app](#) | [Code](#)

Mini URL – URL shortener with link analytics (React, Express, MongoDB) | [mini-url-ui.vercel.app](#) | [Code](#)

BooksLelo – used-textbook marketplace, BCA final-year project (PHP, MySQL, AWS) | [Code](#)

Bolti Topi – Harry Potter Sorting Hat app with English / Hinglish (React Native, Expo) | [Code](#)

SKILLS

Languages: TypeScript, JavaScript, SQL, PHP, HTML/CSS. **Spoken:** English, Hindi, Punjabi

Frontend: React, Next.js, React Native (Expo), Angular, Vite, Zustand, Redux Toolkit, Tailwind CSS, PWA, Web Push

Backend & Data: Node.js, Express, REST APIs, Kafka, Redis, Socket.IO, Serverless, PostgreSQL (row-level security, migrations), MongoDB, MySQL

Testing & Tools: Vitest, Jest, Playwright, AWS, Vercel, Cloudflare, Docker, Git, pnpm, Claude Code, Cursor

EDUCATION

IGNOU, Delhi – *Master of Computer Applications* Aug 2023 – Present

Panjab University (GGDSD College), Chandigarh – *Bachelor of Computer Applications*, Score: 80.45% Aug 2019 – Aug 2022

ACHIEVEMENTS & CERTIFICATIONS

- notJust Hack 2025 – built and launched GumiGumi; selected for the final showcase | notjusthack.com/app/gumigumi
- 2nd prize, Inter-College IT Quiz, D.A.V. College, Chandigarh
- HackerRank certificates: [Node.js \(Intermediate\)](#), [Frontend Developer \(React\)](#)
